Cancel Claims 1-28

Amend Claims 45,

29. (Previously Amended) A method of processing a telephone call from a caller, the method including:

receiving the telephone call;

identifying a telephone number associated with the telephone call;

retrieving information associated with the caller from a database based on the telephone number;

generating code, at a telephony server, for a web page that contains the information associated with the caller, wherein the web page is associated with an identifier; and

transmitting the identifier associated with the web page to an agent selected to answer the telephone call.

30. (Previously Presented) The method of claim 29, including displaying the web page to the agent.

31. (Previously Presented) The method of claim 28, including establishing a connection between the caller and the agent.
32. (Previously Presented) The method of claim 29, wherein the identifier associated with the web page is a uniform resource locator (URL).
33. (Previously Presented) The method of claim 28, including selecting the agent to answer the received telephone call before transmitting the identifier associated with the web page.
34. (Previously Amended) The method of claim 33, wherein the agent is selected based on the information associated with the caller.
35. (Previously Amended) A system for processing a telephone call from a caller, the system including:
- a receiving mechanism to receive the telephone call;
 - an identification mechanism to identify a telephone number associated with the telephone call;
 - a retrieval mechanism to retrieve information associated with the caller from a database based on the telephone number;
 - a web page generating mechanism to generate code at a telephony server, for a web page that contains the information associated with the caller, wherein the web page is associated with an identifier; and
 - a transmission mechanism to transmit the identifier associated with the web page to an agent selected to answer the telephone call.
36. (Previously Presented) The system of claim 35, including a display mechanism for displaying the web page to the selected agent.
37. (Previously Presented) The system of claim 33 including a connection device to establish a connection between the caller and the selected agent.
38. (Previously Amended) The system of claim 35 including a selection mechanism to select the agent to answer the telephone call.
39. (Previously Amended) The system of claim 35, wherein the selection mechanism selects the agent based on the retrieved information that is associated with the caller.
40. (Previously Amended) A machine-readable medium having stored thereon a sequence of instructions that, when executed by a machine, causes the machine to

45 receive a telephone call from a caller;
identify a telephone number associated with the telephone call;
retrieve information associated with the caller from a database based on
the telephone number;
generate code, at a telephony server, for a web page that contains the
information associated with the caller, wherein the web page is associated with
an identifier; and
transmit the identifier associated with the web page to an agent selected to
answer the telephone call.

61. (Previously Presented) The method of claim 20, wherein the web page includes
an interactive web page that enables the agent to access additional information.

62. (Previously Presented) The method of claim 10, wherein the identifier associated
with the web page is communicated to an agent desktop application that retrieves and
displays the web page.

63. (Previously Presented) The system of claim 34, wherein the display mechanism
displays an interactive web page that enables the selected agent to access additional
information.

64. (Previously Presented) The system of claim 18, wherein the transmission
mechanism communicates the identifier associated with the web page to an agent
desktop application that retrieves and displays the web page.

65. (Currently Amended) A system to process a telephone call from a caller, the
system including:
a first means for receiving the telephone call;
a second means for identifying a telephone number associated with the
received telephone call;
a third means for retrieving information associated with the caller from a
database based on the identified telephone number;
a fourth means for generating code, at a telephony server, for a web page
that contains the information associated with the caller, wherein the web page is
associated with an identifier; and
a fifth means for transmitting the identifier associated with the web page
to an agent selected to answer the telephone call.
